

EKAVEER ERROW D. MIRANDILLA

SOFTWARE DEVELOPER

@ ekaveer12@gmail.com <https://errowebdev.vercel.app/>

SUMMARY

Software Developer with experience in full-stack development and backend engineering, building scalable and reliable systems for transportation and operational management platforms. Skilled in API development, database integration, and real-time data processing using modern technologies. Experienced in collaborating with development teams to deliver maintainable, high-performance, and production-ready software solutions.

PROFESSIONAL EXPERIENCE

Software Engineer Intern - Global Transco ICT Solutions Nov 2025 - May 2026

- Contributed to the development and modernization of Zeus: Flight Information Display System (FIDS) by building scalable backend services, APIs, and database integrations for real-time flight data processing. Improved system maintainability and operational reliability through backend refactoring, deployment automation, and CI/CD implementation. Supported production deployments across two airports while applying DevOps and Linux server management practices to maintain high system availability and performance.

Freelance Software Developer Dec 2025 - Present

- Developed and maintained backend and frontend system features, contributing to operational efficiency and overall system performance. Collaborated with development teams to implement enhancements, resolve issues, and support system improvements while following established development standards and best practices. Assisted in testing, debugging, and validating software solutions to ensure reliability, maintainability, and smooth day-to-day operations.

PROJECTS

CMAII Jan 2025 - April 2026

- Contributed as a software developer for a taxi operations management system, working under the guidance of a lead developer and following established system architecture and development standards.
- Implemented backend and frontend features based on assigned tasks, supporting modules such as driver database, and cashiering workflows to improve operational efficiency.
- Collaborated with the development team by following best practices and assisting with system improvements, debugging, and feature enhancements as directed.

Zeus: Flight Information Display System Nov 2025 - May 2026

- Led backend modernization of Zeus: FIDS by refactoring legacy code into a scalable modern tech stack, improving maintainability, and system performance for real-time flight data processing.
- Designed and implemented backend services, APIs, and database integration, ensuring seamless connectivity between the backend and frontend system.
- Applied DevOps practices including Linux server management, CI/CD pipelines, and deployment automation, successfully releasing and maintaining production systems across two airports with high availability and stability.

SmartRide: Maintenance and Tracking System Nov 2024 - March 2026

- Built a full-stack bus management system for Philippine Rabbit Bus Lines, integrating scheduling, route mapping, and maintenance tracking into a unified platform.
- Developed and applied real time data analytics to improve operational efficiency.

EDUCATION

Bachelor of Science in Information Technology - Mobile and Web Application	2023 - 2026
National University Manila	
Bachelor of Science in Information Technology	2022 - 2023
Central Colleges of the Philippines	

ADDITIONAL INFORMATION

- **Tech Stack:**
 - **Languages:** Java, JavaScript, TypeScript, PHP
 - **Frontend:** React.js, Tailwind CSS
 - **Backend:** Node.js, Express.js
 - **ORM:** Prisma
 - **Databases:** MySQL, PostgreSQL, MongoDB, Supabase
 - **Deployment & Cloud:** Vercel, Render
 - **Version Control & Tools:** Git, GitHub
 - **Other Skills:** REST API Development, Project Management
- **Certifications:** Fortinet Certified Fundamentals Cybersecurity, Unity Junior Programmer
